

drobo

Drobo makes award-winning data storage products for small and medium businesses and individual professionals that provide an unprecedented combination of sophisticated data protection and management features, affordable capacity, and ease-of-use. Based on the patented and proven BeyondRAID™ technology, Drobo's ability to deliver "Big Storage in a Small Box" creates the best storage experience ever.

Who Uses Drobo?

More than 150,000 Drobos are in use around the world. Creative professionals were the first to experience just how easy Drobos are to use in protecting their growing photo and video data. Today, small and medium businesses and departments in larger companies are also using Drobo for powerful, yet ultra-easy-to-use and affordable storage to protect their vital business data.

BeyondRAID™ Technology

Integral to all Drobos, BeyondRAID technology virtualizes a pool of disk drives without the limitations of RAID. BeyondRAID adapts automatically to how many drives you have and the amount of data you are storing, so you don't have to manage it. Advanced capabilities like thin provisioning and infinite expansion are built-in, without additional cost.

Self-healing & Self-managing Technology

Drobo storage products are "self-healing" — they seek and repair bad drive blocks to maintain the safest protection level possible. Also, if a drive fails, the Drobo will automatically re-layout the data to return to the highest protection level possible, all without having to manage it.

Flexible & Affordable Storage

Use any hard drive, of any size, make, and model. To grow your storage, simply insert a new drive into any open slot, or replace smaller drives with larger drives on-the-fly. No need for special drive carriers or tools. Just put the drive in and Drobo takes care of the rest.

Did We Mention It Was Simple?

If you understand traffic lights, you'll understand Drobo. Drobo products use familiar status lights to let you know of any issues. Using the management application, Drobo Dashboard, you can also get desktop and email alerts.

Strong enough for business, simple enough for home, it is the best storage experience ever!
